

One retail-44 run: function calls (bars) and the gaps between them

planner actor evaluator

Conductor + faasd

done at 54 s

Argo + Knative (10 s queue)

done at 291 s

Argo + Knative (2 s queue)

done at 117 s

0 50 100 150 200 250 300
seconds since the first planner call (median run)

Gaps between bars are time outside the functions: orchestrator scheduling, state updates and request routing.
